```
ance"
xsd">
```

onse response) {

```
bSocketServer>();
```

```
etName());
```

```
Id());
```

```
Socket()">Close</button>
```

实现websockert作为客户端的功能

) {

取session需要先调用：<http://localhost:9090/test/testSession>这个接口，代码如下：

直接利用客户端连接websocket的服务端。

ocket-chat上了，测试的客户端类是：

sion, token, 用户名等

```
rs(new ChatHandshakeInterceptor()).setAllowedOrigins("*");  
tceptors(new ChatHandshakeInterceptor()).setAllowedOrigins("*").withSockJS();
```

```
etHandler wsHandler, Map<String, Object> attributes) throws Exception {
```

```
andler wsHandler, Exception ex) {
```

```
用userid  
  
teArraySet<WebSocketSession>();  
HashMap<>();  
ConcurrentHashMap<>();  
EBSOCKET_SESSIONIDS = new ConcurrentHashMap<>();
```

```
ion {
```

```
ion {

exception {

ze()+"",username = "+userName+",websocketSessionIdCount = "+sessionMap.size());

ion {
```
